PMP • Six Sigma Green Belt • Named Patent Inventor

EXECUTIVE SUMMARY

Technical program and product leader who turns manual, spreadsheet-bound operations into production platforms the enterprise runs on. Twenty-two years at AT&T, including 12 owning cloud capacity planning platforms as product owner, program manager, and business process analyst; 6 in wireless network deployment, compliance, and project controls; and 5 in sales. **PMP**-certified **Six Sigma Green Belt** and named inventor on U.S. Patent **12,108,260** for the Integrated Network Deployment Tool. Led the AT&T enterprise cloud capacity planning platform across two generations: the original platform returned **$1 million in annualized savings** until technology and business changes retired it in 2020. When the first replacement attempt fell through, made the case for a new P1 Services development team, which had a working prototype **30 days** after receiving the same requirements; the rebuild cut planner data-entry time **70%** and earned the **2025 AT&T Connection Award**.

Fluent where data engineering meets governance: authored the Data Dictionary adopted as the canonical data ingestion contract across five ingestion workstreams, and built the **Palantir Foundry ELT CI/CD pipelines** that standardized **345 historical datasets**. Trusted to say when something is not ready to ship: withheld production sign-off on a replacement platform that repeatedly failed **user acceptance testing (UAT)** and built the data-driven case for a new development team. Equally credible leading sessions for **about 500 global stakeholders** and presenting to **C-level executives**.

SKILLS

Languages: Bash, Python, SQL

Cloud & Data: Azure Data Lake, Azure DevOps, Azure Operator Nexus, Azure SQL, CI/CD, Cloud Administration, Cloud Consulting, Cloud Infrastructure, Data Architecture, Data Dictionaries, Data Governance, Data Integrity, Data Lineage, Database Administration, Database Design, ETL/ELT Pipelines, Medallion Architecture, Microsoft Azure, OpenStack, Palantir AIP, Palantir Foundry, Platform Architecture, Platform Migration, SQL Server, System Migration

Microsoft 365 & Power Platform: Copilot, Excel (Advanced), Microsoft 365, OneDrive, OneNote, Power Apps, Power Automate, Power BI (DAX, semantic models), Power Query, Project, SharePoint & SharePoint Online Administration, Teams, Visio

Frameworks, Libraries & APIs: JSON, .NET, pandas, REST APIs

Developer Tools: Docker, GitHub, GitHub Actions, Jira, Toad, Toad Data Point, Visual Studio, Visual Studio Code

Methodologies: Agile, Automation Anywhere, Backlog Management, Cycle Time Reduction, Design Specifications, IT Project & Program Management (PMBOK/PMI), Process Automation, Process Development, Process Improvement, Record Information Management, Regulatory Compliance, Release Management, Requirements Management, Risk Management, Robotic Process Automation (RPA), Scrum, Six Sigma Green Belt, Software Quality Assurance, Technology Change Management, Test Planning, User Acceptance Testing (UAT), User Experience (UX) Design, User Story Development, Waterfall

Analysis & Communication: Business Intelligence (BI), Business Strategy, Casewise Process Modeling, Cross-Functional Collaboration, Engineering Leadership, Executive Reporting, Financial Modeling, IT Business Analysis, KPI Scorecards, People Management, Sensitive Data Handling, Stakeholder Engagement, Strategic Planning, Technical Communication

Telecom & Network: Enterprise IT Infrastructure, Large-Scale Systems, Network Design, Radio Access Network (RAN), Systems Engineering, Wireless Technologies

OS: Linux, macOS, Windows

EXPERIENCE

AT&T Southfield, Michigan | Dec 2023 – Feb 2026

Senior Technical Product Owner, Data Platform (official title: Senior Systems Engineer)

- **Migrated** cloud capacity planning workflows from legacy Excel to P1 Services (Java, Azure, Palantir Foundry), cutting planner **data-entry time 70%**; directed **UAT**, completing four rounds of individual testing and consolidating cross-team UAT feedback across development and test environments. Delivered a working minimum viable product (MVP) prototype **30 days** after requirements handoff. Earned the **2025 AT&T Connection Award ($8,000)** for the work.
- **Automated** change-control board record creation from published Plan of Record data, eliminating a manual cross-system task.
- **Drove release management** and deployed production **test/release workflows** with a heavy **regression-testing** focus, reducing recurring software delivery defects and improving **engineering velocity**.
- **Designed and built** 6 **ELT CI/CD automated ingestion pipelines** (5 staging, 1 production) in **Palantir Foundry Pipeline Builder** following a **Medallion Architecture** pattern to standardize **345 historical datasets**.
- **Engineered data models** with **composite foreign-key relationships** and aligned field headers and data types for **data integrity, data quality, and end-to-end data lineage** across time; aggregated all datasets into a single **data product** and built the **Ontology** objects and object types behind a working **Workshop application** prototype.
- **Authored the data governance Data Dictionary** adopted as the canonical **data ingestion contract** across five ingestion workstreams, mapping their field terminology to a single master-term standard.

AT&T Southfield, Michigan | Aug 2019 – Dec 2023

Technical Program Manager, Platform Modernization (official title: Professional Systems Engineer)

- **Authored the full requirements engineering specification and system architecture** for an enterprise transformation program replacing the first-generation cloud capacity planning platform at end of life.
- **Managed 75 feature and bug tickets across the transition** (46 for MVP alone), driving **backlog prioritization, sprint planning, and release governance** aligned to business impact.
- **Withheld production sign-off** when the assigned development team repeatedly failed **UAT**; drove a structured reversion to spreadsheets rather than accepting a defective MVP release, keeping planning running while building the case for a team change.
- Used a **SQL data connector in Power Query** to connect to the developer ticketing-system database and built a **pivot-table analysis** of the full backlog, surfacing 6–9-month closure averages on low-complexity tickets and MVP user stories untouched for 15 months; presented the findings to leadership as the **data-driven basis** for the team change.

- **Developed five Power BI dashboards** with **DAX modeling**, enterprise-security-compliant **semantic data models**, **gateways aligned to role-based access control (RBAC)**, and one-click data export.
- **Executed the cloud migration** of a SharePoint site collection from on-premises to **SharePoint Online** as part of a **digital transformation** initiative, owning **risk management planning** and keeping cross-functional stakeholders informed through cutover.
- Constructed a new diagram style comparing manual steps side by side with their mechanized and automated equivalents to communicate **automation roadmaps**; created the framework for a SharePoint wiki covering the cloud technology evolution roadmap.

AT&T Southfield, Michigan | Nov 2016 – Aug 2019

Product Owner, Enterprise Planning Platform (official title: Senior Specialist, Systems Engineer)

- **Delivered an enterprise cloud capacity planning platform** (SQL, .NET) that replaced spreadsheet and email demand collection, generating **$1 million in annualized savings** (10,300 labor hours). Took it from requirements to MVP release in **90 days** with **one developer** and no additional resources. Owned specs, design, UAT, RBAC provisioning, training, and backlog. The architecture later scaled to a virtual resource allocation ticket system.
- Delivered **change-management** functionality for the demand forecasting platform, producing an additional **$500,000 in cost avoidance**; improved capacity-reclamation accuracy **25%** with a quota-reclaim function.
- Improved system data accuracy **25%** by surfacing real-time **OpenStack** allocation views in the reporting tool via **API integration** with an external system.
- Reduced forecast entry time **78%** by specifying a **Java** autofill feature carrying forward the prior year's forecast automatically.
- **Automated demand-to-resource allocation** and achieved **98% order reconciliation** against project plans, with full visibility across all planning workflows.
- Deployed a **governance checklist** and consolidated change-request forms for cloud capacity requests, and supported **end-to-end automation** of quota request and fulfillment.
- Cleared communication roadblocks by implementing **auto-generated notifications** informing users when demand requests were accepted into the Plan of Record.
- **Restructured cross-functional workflows and swim lanes across nine functional teams** for the cloud planning cross-organization **RACI (responsible, accountable, consulted, informed) matrix**, maintaining a running issues log.
- Transformed a skeptical user base of **100+ global virtual network function (vNF) product owners** into process and platform champions by addressing concerns directly and triaging upgrades through **iterative client feedback** and a price-times-quantity value model.
- Launched a global cloud infrastructure support forum: **bi-weekly stakeholder engagement and program governance sessions with about 500 global users and stakeholders**, a group SharePoint site with publishing calendar, a OneNote documentation notebook, tutorial videos, plan archives, and a complete user documentation library.
- **Designed 50+ custom ad hoc SQL reports**; provisioned and maintained **database permissions**.

- Developed management abilities through a departmental **leadership mentoring** program and **mentored** two iCouldBe.org high school students (AT&T partnership) and one **technical development program** participant.

AT&T Southfield, Michigan | Jul 2014 – Nov 2016

Business Process Analyst (official title: Senior Specialist, Technical Architect)

- Defined requirements and the use case for an **Automation Anywhere robotic process automation (RPA)** bot that generated **$31,481 in annual savings** for two years.
- **Audited and reworked 75+ private cloud lifecycle workflows** in Visio and Casewise for **process improvement** and **50% efficiency gains**, satisfying method-and-procedure audits; refined process requirements with internal clients and translated them into objects, models, and diagrams.
- Assumed production of monthly **cloud transformation presentations to C-level executives** after the former resource was eliminated and calibrated department **KPIs** to the executive scorecard.
- **Compiled zero-based study data** across legacy cloud-infrastructure teams in a 300-employee VP organization, delivering actionable **resource allocation and headcount insights** to leadership.
- **Developed advanced SQL reporting expertise**, completing SQL training in three months and writing and debugging SQL in **Toad and Toad Data Point**; automated KPI and metric generation across the cloud planning organization and completed coursework in **cloud computing, APIs, Agile project management, strategic program management, and big data**.

AT&T Southfield, Michigan | Jan 2013 – Jul 2014

Wireless Deployment Project Manager (official title: Specialist, Technical Project Manager)

- Oversaw contractual compliance for a portfolio of **545 4G/LTE network build projects** (350-calendar-day completion baseline each) and reviewed **architecture and engineering document turnover packages** for each of them individually to maintain **project delivery governance**: milestone forecast accuracy, progress completeness, and adherence to timelines.
- **Reduced project build cycle times by 60 business days (about 24%)** through structured **milestone tracking** and cycle-time reduction strategies.
- **Led resource management for 26 contractor direct reports**, covering onboarding, system access provisioning, and equipment deployment in **Fieldglass**, while handling HR matters and space allocation.
- Served as **project management liaison** to radio access network design engineering, driving data specification releases and tower entries in the engineering **database of record**.
- **Developed advanced Excel algorithms** for executive-level program reporting; collaborated across departments to draft **project schedules** and forecast delivery dates under constraints, holding contracted project managers accountable to commitments.
- Engaged engineers and business professionals across the organization to identify at-risk projects and develop **risk responses**.

AT&T Farmington Hills, Michigan | Aug 2011 – Jan 2013

Project Controls Analyst, Network Deployment (official title: Lease Administrator)

- Achieved **$72,000 in annual savings** by applying **Six Sigma** principles to optimize stranded tower leases, creating a report identifying and eliminating leases where rent was paid for space no longer required.

- **Managed change control for the 4G/LTE rollout** across **400+ new cell-site builds**: assessed feasibility, submitted qualified requests, and orchestrated systemic updates for approved changes, driving Plan of Execution change requests to completion.
- Validated radio frequency data sheets against the **Plan of Demand bills of materials (BOMs) and statements of work (SOWs)** for 400+ new cell-site builds, ensuring cell tower configurations aligned to project management records and schedules.
- Crafted weekly **waterfall reports** for senior management with in-depth **risk analysis** and risk response plans covering 400+ new cell-site builds.
- Hosted **plan-alignment meetings with executives** from multiple departments and **led strategic collaboration** between planning, design engineering, and finance to develop realistic **project schedules and budgets** under resource constraints.
- **Led the Record Information Management policy compliance program**; maintained a compliance database ensuring accurate, current documentation for each new cell site; handled **accounts payable** for legal invoicing and served as **team lead for information management**.

AT&T Farmington Hills, Michigan | Oct 2008 – Aug 2011

Lease and Regulatory Compliance Coordinator (official title: Project Coordinator II)

- Served as **intake lead and quality assurance lead** for all new cell-site leases and amendments in Michigan and Indiana, managing the **contractual processes** for tower space.
- **Managed digitization of 2,000+ 3G/GSM cell-site leases and architecture and engineering turnover packages** (build and tower modification files of up to 500 pages each).
- **Verified 100% regulatory compliance** for AT&T-owned cell sites in the submarket, confirming site-location and tower-height surveys met accuracy tolerances required by the **FAA, FCC, and other federal and state regulators**.
- Processed lease paperwork and managed documentation flow with attention to detail, keeping lessor payments **97% on time**.

AT&T Farmington Hills, Michigan | May 2005 – Oct 2008

Campus Sales Representative

- **Co-managed third-party mobile software application projects**, including the rollout of 3G/GSM mobile broadband to staff at the University of Michigan Hospital.
- **Cut monthly churn 20%** by informing university students and staff of applicable discounts and promotions and keeping company-owned stores current on college-segment offers.

AT&T Troy, Michigan | Nov 2003 – May 2005

Retail Communication Specialist

- **Reduced churn 30%** among store customers by advising them of preferred-customer sales and offerings tailored to their interests and needs.

EDUCATION

University of Detroit Mercy School of Law Detroit, Michigan | Aug 2009 – May 2011

Juris Doctor coursework completed (31 credit hours): Contracts, Civil Procedure, Property, Torts, Evidence

Baker College Flint, Michigan | Jan 2006 – May 2009

Bachelor of Business Administration, cum laude, Dean's List, GPA 3.67

Oakland Community College Royal Oak, Michigan | Sep 2002 – Dec 2005

Associate in Liberal Arts, GPA 3.19

TECHNICAL PROJECTS (PERSONAL PORTFOLIO)

Palantir Foundry | Demo Videos: kchyslope.github.io/portfolio/#foundry

- **Clinical Trial Recruitment Hub** (Palantir Foundry, AIP): An AI-assisted clinical-trial eligibility-screening workflow built with Pipeline Builder, the Ontology, AIP Logic, AIP Evals, Automate, and Workshop. The pipeline combines summarized protocol criteria with trial metadata, while AIP Logic compares patient attributes against those criteria and generates an eligibility decision with supporting reasoning. An automation invokes screening when new patients are added. The final step writes the decision and explanation back to the patient object, where a Workshop application supports filtering, protocol review, and human updates to decisions.
- **Distributed Systems Semantic Search** (Palantir Foundry, AIP): Transforms research PDFs into an interactive knowledge-search application. A media set and Pipeline Builder handle PDF text extraction, chunking, large language model (LLM) summaries, entity extraction, and vector embeddings. The Ontology models text chunks and entities with many-to-many relationships, while AIP Logic retrieves relevant passages and generates answers constrained to the supplied references. The final Workshop application brings together natural-language semantic search, retrieved text, AI-generated answers, and an embedded knowledge-graph view. An accompanying AIP Evals suite defines sample questions for testing.

Python | Live Demos: kchyslope.github.io/portfolio/#python

- **Podcast Generator** (LinkedIn Learning, extended; Python, Docker, React): Turns a YAML manifest into a spec-compliant iTunes RSS feed through a Dockerized GitHub Action; a React demo UI previews the episode list and generated XML side by side. Live demo
- **Streaming Subscriber Analytics** (self-directed; Python, pandas, Streamlit, Plotly): End-to-end subscriber analysis with a GUI-agnostic pipeline: exploratory data analysis (EDA), chi-square and analysis of variance (ANOVA) hypothesis testing, and a logistic-regression churn-proxy model. A filterable Streamlit dashboard surfaces the results, and 21 tests cover the pipeline. Live demo
- **Budget App** (freeCodeCamp, extended; Python, Tkinter, JavaScript): Expense-tracking engine with category-based deposits, withdrawals, and inter-category transfers, plus a percentage-spend bar chart. It ships with both a Tkinter GUI and a browser port of the same class. Live demo

- **Polygon Area Calculator** (freeCodeCamp, extended; Python, OOP): Geometry calculator handling triangles, rectangles, and circles alongside any regular n-sided polygon derived from its side count and length. Live demo

Linux

- **Home lab** (Raspberry Pi 5, Ubuntu): Builds and maintains a Docker Compose multi-service stack, with SSH hardening, UFW firewall rules, Fail2ban, and cloud-init configuration.
- **Homebridge smart home bridge** (Raspberry Pi, REST API, JSON): Configures Homebridge through its REST API and JSON configuration to bring non-Apple smart home devices into Apple Home.

PATENTS

Integrated Network Deployment Tool, U.S. Patent 12,108,260 B2, granted Oct 2024. AT&T Intellectual Property I, L.P. | patents.google.com/patent/US12108260

AWARDS

- **AT&T Connection Award: Excel-to-P1 Migration**, AT&T, Jul 2025. $8,000 individual achievement award recognizing data integrity, technical insight, and cross-company collaboration.
- **Six Sigma Stranded Lease Process Improvement Achievement**, AT&T, Dec 2012. Process redesign eliminating rent on stranded tower leases, delivering $72,000 in annual savings.

CERTIFICATIONS

- Project Management Professional (PMP)®, Project Management Institute, #1670459; granted Oct 2013, renewed through Oct 2028
- Six Sigma Green Belt, AT&T, Jan 2012
- 12 Palantir Foundry & AIP certifications, Palantir Technologies, 2025 – 2026
- Claude 101, Anthropic Academy, May 2026
- AI Fluency: Framework and Foundations, Anthropic Academy, May 2026
- Introduction to Claude Cowork, Anthropic Academy, May 2026
- Python Essential Training, LinkedIn Learning, May 2026
- Practical GitHub Actions, LinkedIn Learning, Apr 2026
