SUMMARY

Over 22 years at AT&T, 12 of them in systems engineering. Named inventor on U.S. patent **US 2024/0422572 A1** (Integrated Network Deployment Tool). **PMP** and **Six Sigma Green Belt** certified.

Built the AT&T Cloud Demand Forecasting platform from concept to production, generating **\$1M+ in annualized savings** by automating demand collection workflows. Won the **2025 AT&T Connection Award** for migrating cloud planning tools off Excel, cutting planner data-entry time by **70%**.

Authored the data governance Data Dictionary adopted as the canonical data ingestion contract; standardized **345+ historical datasets** across six **ETL/ELT CI/CD pipelines** in **Palantir Foundry Pipeline Builder** using a Medallion Architecture ingestion model.

SKILLS

Languages: SQL, Python, Bash, JavaScript, HTML

Cloud & Data: Azure SQL, Azure DevOps, Azure Portal, Microsoft Data Lake, OpenStack, ETL/ELT Pipelines, CI/CD, Medallion Architecture, Data Governance, Data Dictionaries, Data Lineage, Records Management

Platforms: Palantir Foundry, Palantir AIP, Power BI (DAX, semantic models), Power Query, Power Flows, Power Apps, SharePoint & SharePoint Online, Confluence, Toad, Toad Data Point

Version Control & Dev: GitHub, GitHub Actions, .NET, Kendo UI

Methodologies: PMP Project Management, Agile SAFe, Scrum, Waterfall, Lean Six Sigma, Robotic Process Automation (Automation Anywhere), Requirements Engineering, User Stories, UAT, Release & Change Management, Risk Management

Analysis & Communication: Business & Systems Analysis, Executive Reporting, KPI Scorecards, Advanced Excel, Visio & Casewise Process Modeling, Stakeholder Engagement

OS: Linux/Ubuntu, Windows 11, macOS

EXPERIENCE

AT&T SERVICES, INC.

Southfield, Michigan

Senior Systems Engineer

Dec 2023 – Feb 2026

- **Migrated** cloud planning tools from legacy Excel to P1 Services (Java, Azure), cutting planner **data-entry time by 70%**; directed **user acceptance testing (UAT)** and completed four rounds of individual testing and consolidated cross-team UAT feedback across development and test environments. Named inventor on U.S. patent **US 2024/0422572 A1** (Integrated Network Deployment Tool) and earned an **\$8,000 2025 AT&T Connection Award** for the work.

- **Automated** change-control board record creation from published Plan of Record data, eliminating a manual cross-system task.
- **Drove release management** and deployed production **test/release workflows** with a heavy **regression-testing** focus, eliminating recurring software delivery defects and improving **engineering velocity**.
- **Designed and built** six production-grade **ETL/ELT CI/CD automated ingestion pipelines** (5 staging, 1 production) in **Palantir Foundry Pipeline Builder** following a **Medallion Architecture** pattern to standardize **345+ historical datasets**; used **PySpark** and **AIP** for debugging and performance optimization, with workstream-level error handling.
- **Engineered data models** with **foreign-key relationships** (composite FK_UNIT key) and aligned field headers for **data integrity, data quality, and end-to-end data lineage** across time; aggregated all datasets into a single **data product** and built the **ontology** objects and object types behind a working **Workshop app** prototype.
- **Authored the data governance Data Dictionary** adopted as the canonical **data ingestion contract**, mapping field terminology across five independently managed ingestion workstreams to a single master-term standard.

AT&T SERVICES, INC.

Southfield, Michigan

Professional Systems Engineer

Aug 2019 – Dec 2023

- **Authored the full requirements engineering specification and system architecture** for an enterprise transformation program replacing the first-generation cloud planning platform at end-of-life.
- **Withheld production sign-off** when the assigned development team repeatedly failed **UAT**; drove a structured reversion to spreadsheets rather than accepting a defective MVP release, keeping planning running while building the case for a team change.
- **Managed 46 feature and bug tickets across the transition**, driving **backlog prioritization, sprint planning, and release governance** aligned to business impact.
- Used a **SQL data connector in Power Query** to connect to the developer ticketing-system database and built a **pivot-table analysis** of the full backlog, surfacing 6–9-month closure averages on low-complexity tickets and untouched 15+--month user stories — findings presented to leadership as the **data-driven basis** for the team change.
- **Developed five Power BI dashboards** with **DAX modeling**, enterprise-security-compliant **semantic data models, RBAC-aligned gateways**, and one-click data export.
- **Executed the cloud migration** of a SharePoint site collection from on-premises to **SharePoint Online** as part of a **digital transformation** initiative, owning **risk management planning** and keeping cross-functional stakeholders informed through cutover.
- Deployed a **governance checklist** and consolidated change-request forms for cloud capacity requests, and supported **end-to-end automation** of quota request and deployment.
- Constructed a new diagram style comparing manual steps side-by-side with their mechanized and automated equivalents to communicate **automation roadmaps**; created the framework for a SharePoint wiki covering the cloud technology evolution roadmap.
- **Decommissioned the legacy demand collection and planning stack** (P3 and Client Hub), publishing monthly Plans of Demand through cutover and transitioning quota-request intake to the enterprise system.

AT&T SERVICES, INC.

Southfield, Michigan

Senior Specialist – Systems Engineer

Nov 2016 – Aug 2019

- **Designed, implemented, trained users on, and supported** an enterprise cloud network forecasting tool enabling correlated placement of network functions – **mechanizing workflow automation** across spreadsheet/email-driven demand collection into a unified **enterprise planning architecture** and generating **\$1 million in annualized savings** (10,300 labor hours). The architecture later scaled to a virtual resource allocation ticket system.
- Drove **change-management** functionality for the demand forecasting tool, producing an additional **\$500,000 in cost avoidance**; improved capacity-reclamation accuracy **25%** with a quota-reclaim function.
- Improved system data accuracy **25%** by surfacing real-time **OpenStack** allocation views in the reporting tool via **API integration** with an external system.
- Reduced forecast entry time **78%** by implementing a **Java** autofill feature carrying forward the prior year's forecast automatically.
- **Automated demand-to-resource allocation** and achieved **98% order reconciliation** against project plans, with full visibility across all planning workflows.
- Transformed a skeptical **global user base of 500** into process and tool champions by addressing concerns directly and triaging upgrades through **iterative client feedback** and a price-times-quantity value model.
- Cleared communication roadblocks by implementing **auto-generated notifications** informing users when demand requests were accepted into the Plan of Record.
- **Designed 50+ custom ad-hoc SQL reports**; provisioned and maintained **database permissions**.
- **Restructured cross-functional workflows and swim lanes across nine functional teams** for the cloud planning cross-organization **RACI**, maintaining a running issues log.
- Launched a global cloud infrastructure support forum – **bi-weekly stakeholder engagement and program governance sessions with 500+ global participants**, a group SharePoint site with publishing calendar and plan archives, and a complete user documentation library.
- Ensured all new functionality passed **UAT** before release.
- Developed management abilities through a departmental **leadership mentoring** program and **mentored** two high school students through the iCouldBe.org partnership with AT&T.

AT&T

Southfield, Michigan

Senior Specialist – Technical Architect

Jul 2014 – Nov 2016

- Defined requirements and the use case for an **Automation Anywhere robotic process automation (RPA)** bot that generated **\$31,481 in annualized savings** over two years.
- **Audited and reworked 75+ cloud workflows** in Visio and Casewise for **process improvement** and **50% efficiency gains**, satisfying method-and-procedure audits; refined process requirements with internal clients and translated them into objects, models, and diagrams.
- Identified documentation gaps after each reorganization and updated process diagrams and data with subject-matter experts across departments.
- Assumed production of monthly **cloud transformation presentations to C-level executives** after the former resource was eliminated, and calibrated department **KPIs** to the executive scorecard.

- **Compiled zero-based study data** across legacy cloud-infrastructure teams in a 300-employee VP organization, delivering actionable **resource allocation and headcount insights** to leadership.
- Maintained the knowledge base of managed cloud platform **architecture, strategy, process, and training**.
- **Developed advanced SQL reporting expertise** – completed SQL training in three months, writing and debugging SQL in **Toad and Toad Data Point** – and automated KPI and metric generation across the cloud planning organization, alongside intensive coursework in **cloud computing, APIs, Agile project management, strategic program management, and big data**.

AT&T

Southfield, Michigan

Specialist – Technical Project Manager

Jan 2013 – Jul 2014

- Oversaw a portfolio of **545 network build projects** (350-day completion baseline each), reviewing **500+ project documents** to maintain **project delivery governance** – milestone forecast accuracy, progress completeness, and adherence to timelines.
- **Reduced project build cycle times by 60 business days (20%)** through structured **milestone tracking** and cycle-time reduction strategies.
- **Led resource management for 26 contractor direct reports** – onboarding, system access provisioning, and equipment deployment in **Fieldglass** – while handling HR matters and space allocation.
- Served as **project management liaison** to radio access network design engineering, driving data specification releases and tower entries in the engineering **database of record**.
- **Developed advanced Excel algorithms** for executive-level program reporting; collaborated across departments to draft **project schedules** and forecast delivery dates under significant constraints, holding contracted project managers accountable to commitments.
- Engaged engineers and business professionals across the organization to identify at-risk projects and develop effective **risk responses**.

AT&T

Farmington Hills, Michigan

Lease Administrator

Aug 2011 – Jan 2013

- Achieved **\$72,000 in annual savings** by applying **Six Sigma** principles to optimize stranded tower leases – creating a report identifying and eliminating leases where rent was paid for space no longer required.
- **Managed change control for the LTE rollout** across **400+ new cell site builds**: assessed feasibility, submitted qualified requests, and orchestrated systemic updates for approved changes, driving Plan of Execution change requests to completion.
- Validated radio frequency data sheets against the **plan of demand** for 300+ new site builds, ensuring cell tower configurations aligned to project management records and schedules.
- Crafted weekly **waterfall reports** for senior management with in-depth **risk analysis** and risk response plans covering 400 new site builds.
- Hosted **plan-alignment meetings with executives** from multiple departments, and led collaboration between planning, design engineering, and finance to develop realistic **project schedules and budgets** under resource constraints.
- **Led the SPI Record Information Management policy compliance program**; maintained a compliance database ensuring accurate, current documentation for each new cell site; handled **accounts payable** for legal invoicing and served as **team lead for information management**.

AT&T

Farmington Hills, Michigan

Project Coordinator II

Oct 2008 – Aug 2011

- Served as **intake lead and quality assurance** for all new cell-site leases and amendments in Michigan and Indiana, managing the **contractual processes** for tower space.
- **Managed digitization of 2,000+ cell site documents** (build and tower modification files of up to 500 pages each).
- **Verified 100% regulatory compliance** for AT&T-owned cell sites in the submarket, ensuring FAA-required surveys of site locations and tower heights met fault tolerances required by the **FAA, FCC, and other federal and state regulators**.
- Processed lease paperwork and managed documentation flow with exceptional attention to detail, keeping lessor payments **97% on time**.

AT&T MOBILITY

Farmington Hills, Michigan

Campus Sales Representative

May 2005 – Oct 2008

- **Consulted** on customized mobile services and devices, translating **high-level client requirements** into service and device offerings and coordinating **procurement** with service management.
- **Co-managed third-party mobile software application projects**, including the rollout of UMTS mobile broadband to staff at the University of Michigan Hospital.
- Achieved outsized **growth in the new college and university segment** across accounts with little or no prior AT&T Mobility presence.
- Owned the **end-to-end customer experience** – from gatekeepers to C-level executives – including overall customer satisfaction.
- **Spearheaded marketing campaigns without a budget** by leveraging early social media and other no-cost channels.
- **Reduced churn 20% per month** by informing university students and staff of applicable discounts and promotions and keeping company-owned stores current on college-segment offers.
- Retained existing customers and won new relationships through rapport, product and service support, and **consultative selling**; initiated store partnerships to capture and record every sales opportunity.

AT&T

Troy, Michigan

Retail Communication Specialist

Nov 2003 – May 2005

- **Consulted** customers on business and individual service options, documenting sales in customer profile records and processing payments.
- **Reduced churn 30%** among store customers by advising them of preferred-customer sales and offerings tailored to their interests.
- Met and exceeded strategic **retail directives** at the individual level.

EDUCATION

University of Detroit Mercy School of Law

Detroit, Michigan

Juris Doctor coursework completed (31 credit hours) — Contracts, Civil Procedure, Property, Torts, Evidence

Aug 2009 – May 2011

Baker College

Michigan

Bachelor of Business Administration — Cum Laude; Dean's List. GPA: 3.67

Jan 2006 – May 2009

Oakland Community College

Michigan

Associate in Liberal Arts, awarded December 2005. GPA: 3.19

Sep 2002 – Dec 2005

PATENTS

Integrated Network Deployment Tool — US 2024/0422572 A1, AT&T Intellectual Property I, L.P. Published December 19, 2024.

AWARDS

- **AT&T Connection Award: Excel-to-P1 Migration** — AT&T, July 2025. \$8,000 individual achievement award recognizing data integrity, technical insight, and cross-company collaboration.
- **Six Sigma Stranded Lease Process Improvement Achievement** — AT&T, December 2012. Process redesign eliminating rent on stranded tower leases, delivering \$72,000 in annual savings.

CERTIFICATIONS

- Project Management Professional (PMP)® — Project Management Institute, #1670459; granted October 2013, renewed through October 2028
