SUMMARY

Patent-holding systems engineering leader and cloud-infrastructure transformation architect with a 23-year career at AT&T — 12 years in systems engineering — converting ambiguous enterprise problems into production-grade platforms. Named inventor on published US patent (US 2024/0422572 A1) for the Integrated Network Deployment Tool. PMP and Six Sigma Green Belt certified. Generated \$1M+ in annualized savings through workflow mechanization and automation. Architected and shipped the AT&T Cloud Demand Forecasting platform MVP from concept to production in under 90 days. Standardized 345+ inconsistent historical datasets across five staging pipelines and one production pipeline using Palantir Foundry Pipeline Builder; authored the enterprise Data Dictionary establishing data governance standards; built ETL/ELT CI/CD pipelines in Foundry using PySpark and AIP. Connection Award recipient (2025) for the Excel-to-P1 migration that cut planner data-entry time by 70%.

SKILLS

Languages: SQL, Python, Bash, JavaScript

Cloud & Data: Azure SQL, Azure Portal, Microsoft Data Lake, Snowflake

Platforms: Palantir Foundry, Palantir AIP, Power BI, Power Flows, Power Apps, SharePoint

Version Control: GitHub, GitHub Actions

Web / Dev: HTML, .NET, Java, Kendo UI

Methodologies: Agile SAFe, Scrum, Waterfall, Six Sigma

OS: Linux/Ubuntu, Windows 11, MacOS

EXPERIENCE

Senior Systems Engineer — Cloud Infrastructure Planning

AT&T | Southfield, MI (Hybrid) | December 2023 – February 2026

- Spearheaded migration of cloud planning tools from legacy Excel to P1 Services (Java, Azure), achieving a 70% reduction in data-entry time — recognized with the 2025 AT&T Connection Award.
- Standardized 345+ historical datasets across five ETL/ELT pipelines for ingestion into Palantir Foundry and Power BI Data Lake; designed data models with foreign-key relationships and aligned field headers to ensure data integrity and end-to-end data lineage.
- Built five production-grade CI/CD data aggregation pipelines in Palantir Foundry with workstream-level error handling and scripting; used AIP for rapid PySpark debugging and performance optimization.
- Developed five Power BI dashboards using DAX modeling with enterprise-security-compliant semantic data models and RBAC-aligned gateways.
- Deployed production test/release workflows with strong regression-testing emphasis, improving engineering velocity and eliminating recurring software delivery defects.
- Managed 46 feature and bug tickets; drove backlog prioritization and sprint planning in Azure DevOps based on cumulative business impact.
- Authored data governance data dictionary mapping field terminology across five independently-managed data ingestion workstreams to a unified master-term standard, enabling consistent cross-workstream alignment.
- Attended a two-day virtual Snowflake seminar and 24 classroom hours of Network Leadership Execution training.

Professional Systems Engineer — Cloud Infrastructure Planning

AT&T | Southfield, MI (Hybrid) | August 2019 – December 2023

- Authored full requirements engineering specification and system architecture design for the replacement of the first-generation cloud planning platform as it reached end-of-life.

- Withheld production sign-off when the assigned development team repeatedly failed UAT — citing inconsistent field output, absent navigation features, and outright refusal to implement regression testing.
- Drove a structured reversion to spreadsheets rather than accept a defective release, maintaining planning continuity while building the case for a development team change.
- Connected directly to the project ticketing system and constructed a pivot table analysis of the full backlog to make the case for the transition.
- Analysis surfaced that the team averaged 6–9 months to close low-complexity tickets and that a material share of user stories had never been opened or updated since submission — some untouched for 15+ months; presented findings to leadership as the data-driven basis for the team change.
- Designed Power BI dashboards with one-click data export functionality.
- Executed cloud migration of SharePoint site collection from on-premises to SharePoint Online; managed risk mitigation and communication across cross-functional stakeholders.
- Decommissioned legacy demand collection and planning stack, completing end-to-end platform modernization.

Senior Specialist, Systems Engineer — Cloud Infrastructure Planning

AT&T | Southfield, MI (Hybrid) | November 2016 – August 2019

- Mechanized workflow automation across spreadsheet/email-driven demand collection and planning, consolidating into a unified enterprise planning architecture and generating \$1M+ in annualized savings.
- Achieved 98% order reconciliation against project plans by automating demand-to-resource allocation, enabling end-to-end visibility across planning workflows.
- Built and deployed two cloud planning modules — demand capture and network planning physical resource confirmation — with end-to-end visibility and downstream handoff automation.
- Designed 50+ custom ad-hoc reports in SQL; provisioned and maintained database permissions.
- Streamlined cross-functional workflows and swim lanes across nine functional teams; hosted bi-weekly stakeholder engagement sessions with 500+ global participants.

Senior Specialist, Technical Architect — Cloud Infrastructure Planning

AT&T | Southfield, MI (Hybrid) | July 2014 – November 2016

- Automated monthly executive KPI deck assembly with Automation Anywhere RPA bots, saving \$30K+ annually.
- Audited and optimized 75+ cloud workflows, achieving 50% efficiency gains.
- Developed advanced SQL reporting expertise and automated metric generation across the cloud planning organization.

Specialist, Technical Project Management — RAN Infrastructure

AT&T | Southfield, MI | January 2013 – July 2014

- Reduced project build cycle times by 20%; reviewed 500+ project documents to ensure milestone compliance.
- Supervised 26 contractors through onboarding, system access provisioning, and equipment deployment in Fieldglass.
- Developed advanced Excel algorithms for executive-level project reporting.

Lease Administrator — RAN Infrastructure

AT&T | Farmington Hills, MI | August 2011 – January 2013

- Managed change control for LTE rollout across 400+ new cell site builds.
- Applied Six Sigma principles to optimize stranded tower leases, saving \$72K annually.
- Led SPI Record Information Management policy compliance program.

Project Coordinator II — RAN Infrastructure

AT&T | Farmington Hills, MI | October 2008 – August 2011

- Verified 100% regulatory compliance for all AT&T-owned cell sites in the submarket.
- Managed digitization of 2,000+ cell site documents; ensured 97% on-time lessor payments.

PATENTS

Integrated Network Deployment Tool | US 2024/0422572 A1 | AT&T Intellectual Property I, L.P. | Published December 19, 2024

EDUCATION

Baker College | Bachelor of Business Administration (BBA), Cum Laude | June 2009

University of Detroit Mercy School of Law | Law Extended Evening — Contracts, Civil Procedure, Property, Evidence (Coursework Completed) | 2009–2010

Oakland Community College | Associate in Liberal Arts | December 2005
