PMP · Six Sigma Green Belt · Named Patent Inventor

EXECUTIVE SUMMARY

Technical program and product leader who turns manual, spreadsheet-bound operations into production platforms the enterprise runs on. Twenty-two years at AT&T: twelve owning cloud capacity planning platforms as product owner, program manager, and business process analyst; six in wireless network deployment project management and project controls; and five in sales. **PMP**-certified **Six Sigma Green Belt** and named inventor on U.S. patent **US 2024/0422572 A1** for the Integrated Network Deployment Tool. Delivered the AT&T enterprise cloud capacity planning tool that returned **$1 million in annualized savings**, then migrated cloud capacity planning from Excel to P1 Services, cutting planner data-entry time **70%**.

Fluent where data engineering meets governance: authored the Data Dictionary adopted as the enterprise's canonical data ingestion contract, standardizing **345 historical datasets** across **ETL/ELT pipelines** in **Palantir Foundry**. Trusted to say when something is not ready to ship: withheld production sign-off on a replacement tool that repeatedly failed **UAT** and built the data-driven case for a new development team. Equally credible leading sessions for **~500 global stakeholders** and presenting to **C-level executives**.

SKILLS

Languages: SQL, Python, Bash, HTML

Cloud & Data: Azure SQL, Azure DevOps, Azure Portal, Azure Data Lake, OpenStack, ETL/ELT Pipelines, CI/CD, Medallion Architecture, Data Governance, Data Dictionaries, Data Lineage, Records Management, Copilot

Platforms: Palantir Foundry, Palantir AIP, Microsoft Office 365, Microsoft OneDrive, Microsoft Access, Power BI (DAX, semantic models), Power Query, Power Automate, Power Apps, SharePoint & SharePoint Online, Visual Studio IDE, VS Code, Toad IDE, Toad Data Point, Docker

Version Control & Dev: GitHub, GitHub Actions, .NET, Kendo UI

Methodologies: PMBOK/PMI methodologies, Agile, Scrum, Waterfall, Lean Six Sigma, Robotic Process Automation (Automation Anywhere), Requirements Engineering, User Stories, Jira, UAT, Release & Change Management, Risk/Jeopardy Management

Analysis & Communication: Business & Systems Analysis, Executive Reporting, KPI Scorecards, Advanced Excel, Visio & Casewise Process Modeling, Stakeholder Engagement

OS: Linux, Windows, macOS

EXPERIENCE

AT&T — Southfield, Michigan

Senior Technical Product Owner, Data Platform — Dec 2023 – Feb 2026

- **Migrated** cloud capacity planning tools from legacy Excel to P1 Services (Java, Azure, Palantir Foundry), cutting planner **data-entry time by 70%**; directed **user acceptance testing (UAT)**, completing four rounds of individual testing and consolidating cross-team UAT feedback across development and test environments. Earned the **2025 AT&T Connection Award ($8,000)** for the work.
- **Automated** change-control board record creation from published Plan of Record data, eliminating a manual cross-system task.
- **Drove release management** and deployed production **test/release workflows** with a heavy **regression-testing** focus, reducing recurring software delivery defects and improving **engineering velocity**.
- **Designed and built** six production-grade **ETL/ELT CI/CD automated ingestion pipelines** (5 staging, 1 production) in **Palantir Foundry Pipeline Builder** following a **Medallion Architecture** pattern to standardize **345 historical datasets**.
- **Engineered data models** with **composite foreign-key relationships** and aligned field headers and data types for **data integrity, data quality, and end-to-end data lineage** across time; aggregated all datasets into a single **data product** and built the **ontology** objects and object types behind a working **Workshop app** prototype.
- **Authored the data governance Data Dictionary** adopted as the canonical **data ingestion contract**, mapping field terminology across five independently managed ingestion workstreams to a single master-term standard.

AT&T Southfield, Michigan

Technical Program Manager, Platform Modernization Aug 2019 – Dec 2023

- **Authored the full requirements engineering specification and system architecture** for an enterprise transformation program replacing the first-generation cloud capacity planning platform at end-of-life.
- **Withheld production sign-off** when the assigned development team repeatedly failed **UAT**; drove a structured reversion to spreadsheets rather than accepting a defective MVP release, keeping planning running while building the case for a team change.
- **Managed 75 feature and bug tickets across the transition** (46 for MVP alone), driving **backlog prioritization, sprint planning, and release governance** aligned to business impact.
- Used a **SQL data connector in Power Query** to connect to the developer ticketing-system database and built a **pivot-table analysis** of the full backlog, surfacing 6–9-month closure averages on low-complexity tickets and MVP user stories untouched for 15+ months; presented the findings to leadership as the **data-driven basis** for the team change.
- **Developed five Power BI dashboards** with **DAX modeling**, enterprise-security-compliant **semantic data models**, **RBAC-aligned gateways**, and one-click data export.
- **Executed the cloud migration** of a SharePoint site collection from on-premises to **SharePoint Online** as part of a **digital transformation** initiative, owning **risk management planning** and keeping cross-functional stakeholders informed through cutover.
- Deployed a **governance checklist** and consolidated change-request forms for cloud capacity requests, and supported **end-to-end automation** of quota request and fulfillment.
- Constructed a new diagram style comparing manual steps side-by-side with their mechanized and automated equivalents to communicate **automation roadmaps**; created the framework for a SharePoint wiki covering the cloud technology evolution roadmap.
- **Decommissioned the legacy demand collection and planning stack** (P3 and Client Hub), publishing monthly Plans of Demand through cutover and transitioning quota-request intake to the enterprise system.

AT&T Southfield, Michigan

Product Owner, Enterprise Planning Platform Nov 2016 – Aug 2019

- **Specified, designed, implemented, directed UAT for, onboarded and trained users on, and supported throughout its lifecycle** (including backlog prioritization and grooming, provisioning RBAC for end users) an enterprise cloud capacity planning tool (SQL, .NET) enabling correlated placement of network functions, **mechanizing workflow automation** across spreadsheet/email-driven demand collection into a **unified enterprise planning architecture** and generating **$1 million in annualized savings** (10,300 labor hours). The architecture later scaled to a virtual resource allocation ticket system.
- **Restructured cross-functional workflows and swim lanes across nine functional teams** for the cloud planning cross-organization **RACI**, maintaining a running issues log.
- Transformed a skeptical user base of **100+ global vNF product owners** into process and tool champions by addressing concerns directly and triaging upgrades through **iterative client feedback** and a price-times-quantity value model.
- Launched a global cloud infrastructure support forum: **bi-weekly stakeholder engagement and program governance sessions with ~500 global users and stakeholders**, a group SharePoint site with publishing calendar, a OneNote documentation notebook, tutorial videos, plan archives, and a complete user documentation library.
- Delivered **change-management** functionality for the demand forecasting tool, producing an additional **$500,000 in cost avoidance**; improved capacity-reclamation accuracy **25%** with a quota-reclaim function.
- Improved system data accuracy **25%** by surfacing real-time **OpenStack** allocation views in the reporting tool via **API integration** with an external system.
- Reduced forecast entry time **78%** by implementing a **Java** autofill feature carrying forward the prior year's forecast automatically.
- **Automated demand-to-resource allocation** and achieved **98% order reconciliation** against project plans, with full visibility across all planning workflows.
- Cleared communication roadblocks by implementing **auto-generated notifications** informing users when demand requests were accepted into the Plan of Record.
- **Designed 50+ custom ad-hoc SQL reports**; provisioned and maintained **database permissions**.
- Developed management abilities through a departmental **leadership mentoring** program and **mentored** two iCouldBe.org high school students (AT&T partnership) and one **technical development program** participant.

AT&T Southfield, Michigan

Business Process Analyst Jul 2014 – Nov 2016

- Defined requirements and the use case for an **Automation Anywhere robotic process automation (RPA)** bot that generated **$31,481 in annualized savings** over two years.
- **Audited and reworked 75+ private cloud lifecycle workflows** in Visio and Casewise for **process improvement** and **50% efficiency gains**, satisfying method-and-procedure audits; refined process requirements with internal clients and translated them into objects, models, and diagrams.
- Assumed production of monthly **cloud transformation presentations to C-level executives** after the former resource was eliminated and calibrated department **KPIs** to the executive scorecard.

- **Compiled zero-based study data** across legacy cloud-infrastructure teams in a 300-employee VP organization, delivering actionable **resource allocation and headcount insights** to leadership.
- **Developed advanced SQL reporting expertise**, completing SQL training in three months and writing and debugging SQL in **Toad and Toad Data Point**; automated KPI and metric generation across the cloud planning organization and completed coursework in **cloud computing, APIs, Agile project management, strategic program management, and big data**.

AT&T Southfield, Michigan

Wireless Deployment Project Manager Jan 2013 – Jul 2014

- Oversaw contractual compliance for a portfolio of **545 4G/LTE network build projects** (350-day completion baseline each) and reviewed **architecture and engineering document turnover packages** for each of them individually to maintain **project delivery governance**: milestone forecast accuracy, progress completeness, and adherence to timelines.
- **Reduced project build cycle times by 60 business days (20%)** through structured **milestone tracking** and cycle-time reduction strategies.
- **Led resource management for 26 contractor direct reports**, covering onboarding, system access provisioning, and equipment deployment in **Fieldglass**, while handling HR matters and space allocation.
- Served as **project management liaison** to radio access network design engineering, driving data specification releases and tower entries in the engineering **database of record**.
- **Developed advanced Excel algorithms** for executive-level program reporting; collaborated across departments to draft **project schedules** and forecast delivery dates under constraints, holding contracted project managers accountable to commitments.
- Engaged engineers and business professionals across the organization to identify at-risk projects and develop **risk responses**.

AT&T Farmington Hills, Michigan

Project Controls Analyst, Network Deployment Aug 2011 – Jan 2013

- Achieved **$72,000 in annual savings** by applying **Six Sigma** principles to optimize stranded tower leases, creating a report identifying and eliminating leases where rent was paid for space no longer required.
- **Managed change control for the 4G/LTE rollout** across **400+ new cell site builds**: assessed feasibility, submitted qualified requests, and orchestrated systemic updates for approved changes, driving Plan of Execution change requests to completion.
- Validated radio frequency data sheets against the **Plan of Demand BOMs and SOWs** for 300+ new site builds, ensuring cell tower configurations aligned to project management records and schedules.
- Crafted weekly **waterfall reports** for senior management with in-depth **risk analysis** and risk response plans covering 400 new site builds.
- Hosted **plan-alignment meetings with executives** from multiple departments and **led strategic collaboration** between planning, design engineering, and finance to develop realistic **project schedules and budgets** under resource constraints.
- **Led the Record Information Management policy compliance program**; maintained a compliance database ensuring accurate, current documentation for each new cell site; handled **accounts payable** for legal invoicing and served as **team lead for information management**.

AT&T Farmington Hills, Michigan

Lease and Regulatory Compliance Coordinator Oct 2008 – Aug 2011

- Served as **intake lead and quality assurance lead** for all new cell-site leases and amendments in Michigan and Indiana, managing the **contractual processes** for tower space.
- **Managed digitization of 2,000+ 3G/GSM cell site leases and architecture and engineering turnover packages** (build and tower modification files of up to 500 pages each).
- **Verified 100% regulatory compliance** for AT&T-owned cell sites in the submarket, ensuring FAA-required surveys of site locations and tower heights met fault tolerances required by the **FAA, FCC, and other federal and state regulators**.
- Processed lease paperwork and managed documentation flow with attention to detail, keeping lessor payments **97% on time**.

AT&T Farmington Hills, Michigan

Campus Sales Representative May 2005 – Oct 2008

- **Co-managed third-party mobile software application projects**, including the rollout of 3G/GSM mobile broadband to staff at the University of Michigan Hospital.
- **Reduced churn 20% per month** by informing university students and staff of applicable discounts and promotions and keeping company-owned stores current on college-segment offers.

AT&T Troy, Michigan

Retail Communication Specialist Nov 2003 – May 2005

- **Reduced churn 30%** among store customers by advising them of preferred-customer sales and offerings tailored to their interests and needs.

EDUCATION

University of Detroit Mercy School of Law Detroit, Michigan

Juris Doctor coursework completed (31 credit hours): Contracts, Civil Procedure, Property, Torts, Evidence Aug 2009 – May 2011

Baker College Flint, Michigan

Bachelor of Business Administration, Cum Laude; Dean's List. GPA: 3.67 Jan 2006 – May 2009

Oakland Community College Royal Oak, Michigan

Associate in Liberal Arts, awarded December 2005. GPA: 3.19 Sep 2002 – Dec 2005

TECHNICAL PROJECTS (PERSONAL AND PORTFOLIO)

Portfolio: kchyslope.github.io/portfolio

- **AI semantic search with output validation (Palantir AIP):** Built a natural-language search tool over 69 PDFs using retrieval-augmented generation (RAG) on distributed, parallel cluster computing. Chunked and entity-tagged the source documents, linked them in a relationship graph, and built evaluation test suites to check the

AI's answers against the source, so it reports when an answer isn't in the data.

- **Home lab (Raspberry Pi 5, Ubuntu):** Built and maintain a Docker Compose multi-service stack, with SSH hardening, UFW firewall rules, Fail2ban, and cloud-init configuration.
- **REST API and JSON configuration:** Configured Homebridge on a Raspberry Pi through its REST API and JSON configuration to bring non-Apple smart home devices into Apple Home. Building a Palantir Foundry pipeline that pulls National Weather Service data through a REST API connection (in progress).
- **Portfolio demos:** A Palantir Foundry pharma-trial screening demo, a Dockerized GitHub Action, and a Python streaming subscriber analytics project, all with AI-created front ends so people can see how the work functions and interact with them.

PATENTS

Integrated Network Deployment Tool, US 2024/0422572 A1, AT&T Intellectual Property I, L.P. Published December 19, 2024.

AWARDS

- **AT&T Connection Award: Excel-to-P1 Migration**, AT&T, July 2025. $8,000 individual achievement award recognizing data integrity, technical insight, and cross-company collaboration.
- **Six Sigma Stranded Lease Process Improvement Achievement**, AT&T, December 2012. Process redesign eliminating rent on stranded tower leases, delivering $72,000 in annual savings.

CERTIFICATIONS

- Project Management Professional (PMP)®, Project Management Institute, #1670459; granted October 2013, renewed through October 2028
- Six Sigma Green Belt, AT&T, January 2012
- 12 Palantir Foundry & AIP certifications, Palantir Technologies, 2025–2026
- Claude 101, Anthropic Academy, May 2026
- AI Fluency: Framework and Foundations, Anthropic Academy, May 2026
- Introduction to Claude Cowork, Anthropic Academy, May 2026
- Python Essential Training, LinkedIn Learning, May 2026
- Practical GitHub Actions, LinkedIn Learning, April 2026
